## **Election/Restriction**

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- Claims 1-39, drawn to a method and apparatus for using a command to change an internal setting of a portable radio device, classified in class 455, subclasses 418, 419, 420.
- II. Claims 40-74, drawn to a method and apparatus for requesting external connection using an out-of-bound channel, classified in class 455, subclasses 461, 462, 464, 465.
- III. Claims 75-92, drawn to a method and apparatus for communicating a message that contains information for presentation to a user of a portable radio device, classified in class 455, subclasses 72, 566.
- 1. The inventions are distinct, each from the other because of the following reasons:

  Inventions I and II are related as subcombinations disclosed as usable together
  in a single combination. The subcombinations are distinct if they do not overlap in
  scope and are not obvious variants, and if it is shown that at least one subcombination
  is separately usable. In the instant case, subcombination I has separate utility such as
  a command for changing internal setting. See MPEP § 806.05(d).

Inventions II and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct if they do not overlap in scope and are not obvious variants, and if it is shown that at least one subcombination

is separately usable. In the instant case, subcombination II has separate utility such as requesting for external connection on an out-of-bound channel. See MPEP § 806.05(d).

Inventions III and I are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct if they do not overlap in scope and are not obvious variants, and if it is shown that at least one subcombination is separately usable. In the instant case, subcombination III has separate utility such as an message containing information (text sequence or video sequence) for presentation to a user. See MPEP § 806.05(d).

- 2. Because these inventions are independent or distinct for the reasons given above and the inventions require a different field of search (see MPEP § 808.02), restriction for examination purposes as indicated is proper.
- 3. Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.
- 4. The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Duc M. Nguyen whose telephone number is 571-272-7893. The examiner can normally be reached on Monday-Friday (9:00AM - 6:00 PM).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Matthew Anderson can be reached on 571-272-4177. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
